

Global warming set to break key 1.5C limit for first time

1 / May · Comments

COP27

This is how El Niño brought heat to the surface of the Pacific in 2015

By Matt McGrath

Environmental Correspondent

Our overheating world is likely to break a key temperature limit for the first time over the next few years, scientists predict.

Researchers say there's now a 66% chance we will pass the 1.5C global warming threshold between now and 2027.
